In Brief:

- **TickerPlant announced a partnership with Google Cloud to grow CryptoWire's ecosystem.**
- **CryptoWire's knowledge portals will deliver vital information about crypto and blockchain technology.**
- **The partnership will help investors to choose the right crypto assets for investment.**

TickerPlant announced a collaboration with Google Cloud to grow the CryptoWire ecosystem to keep updated all stakeholders of crypto and develop blockchain technology. CryptoWire is TickerPlant's global initiative to pass vital crypto information to crypto lovers on the app.

The partnership will leverage CryptoWire's knowledge portals, such as Crypto TV, and Crypto University. Using these portals consumers can learn technology thoroughly and keep themselves updated with each and every minute update from cryptoverse. The initiative will guide investors to make a fruitful investment in crypto assets.

Other than Google Cloud's data infrastructure, CryptoWire will also take inspiration from Google Cloud's advanced solutions such as data analytics, machine learning, and artificial intelligence for greater customer experience.

On a talk about Collaboration with Google Cloud, TickerPlant Managing Director and CEO Jigish Sonagara said, “Working with Google Cloud, we can provide access to people across the world with well-crafted information with speed and precision in a rapidly changing environment and ensure a meaningful approach to address the information lacuna.”

Tickerplant will use Google Cloud’s efficient data management infrastructure to amplify and innovate Cryptowire’s applications. Also, the company is planning to facilitate its platform with video streaming, content delivery, smart business execution, and opportunity convergence.

Google Cloud India Managing Director Bikram Bedi said, “We are excited to provide the secure and scalable cloud infrastructure to innovative businesses like TickerPlant as it accelerates and scales access to blockchain and cryptocurrency information with CryptoWire, and to supporting them as they develop new products and offerings to create value for customers and users.”

CryptoWire can play a crucial role in crypto expansion in India. Recently, CryptoWire has launched India’s first crypto index, IC15, which will monitor the top 15 cryptocurrency performance.
